

Finding Tourists Through Social Media

Andrew Seefeldt
Data Scientist

Overview

COVID-19 has changed the world.
Tourism marketing in Costa Rica
has not kept up with the change.

Social Media marketing can be
challenging due to the amount of
Expats that occupy the same
channels

To increase efficiency in marketing
we need a way to differentiate
between tourists and Ticos

Purpose

The point of this project is to use social media posts to find tourists that we can digitally market to while identifying digital nomads that can become marketing partners with an 80% accuracy rate.

Procedures

Data was collected from Reddit
"CostaRica" and "CostaRicaTravel"

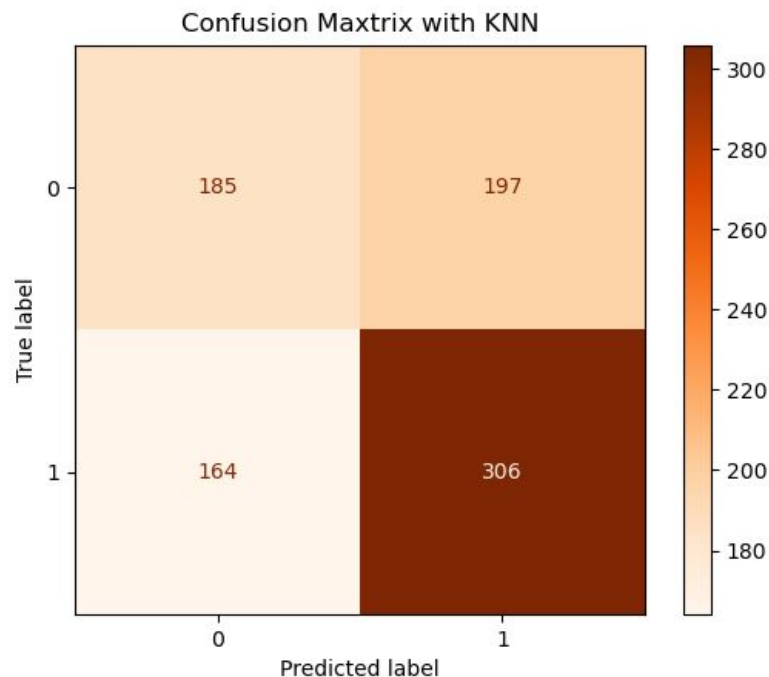

Data was transformed into
lowercase, cleaned for doubles,
and common compound-words
were combined (costa_rica,
san_jose, and la_fortuna)

Data was put through several ML
models to find the highest succes
in telling a Tico from a Tourist

Base score is 57%

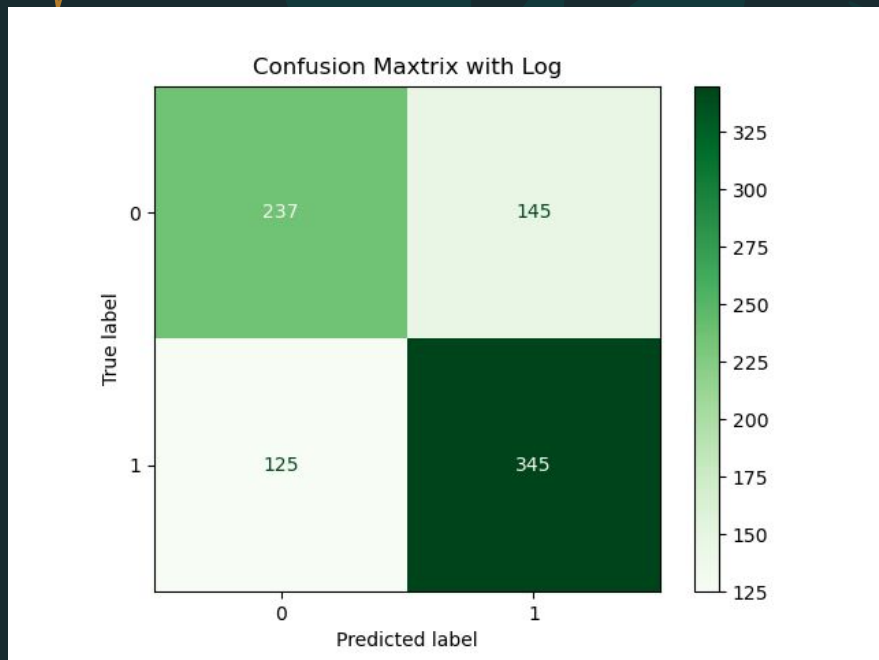

KNN

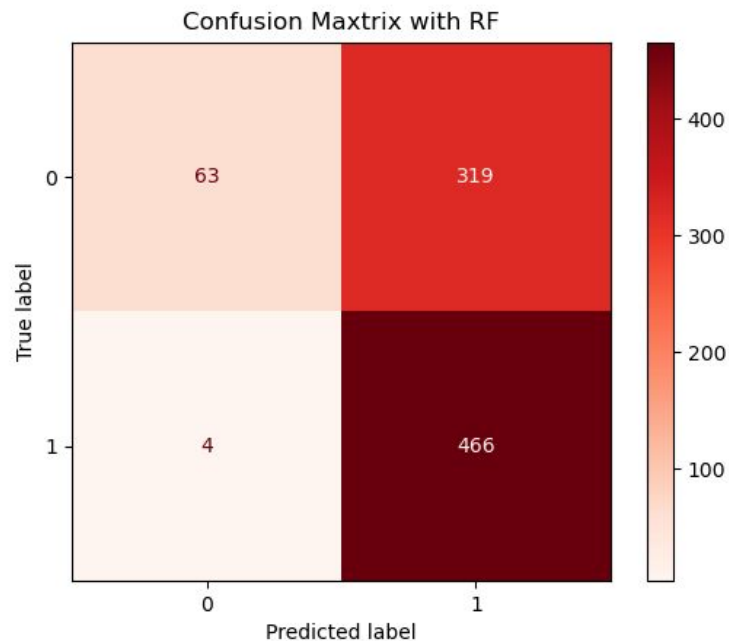

- Parameters Examined
- Stop words: none, English, Custom, Custom + English
- Preprocess: none, Lemmatize, and Stem
- Ngram: 1:1, 1:2, 1:3, 2:2
- K Neighbors: 3, 5, 7, 10
- Test Score of 56.69%

Log

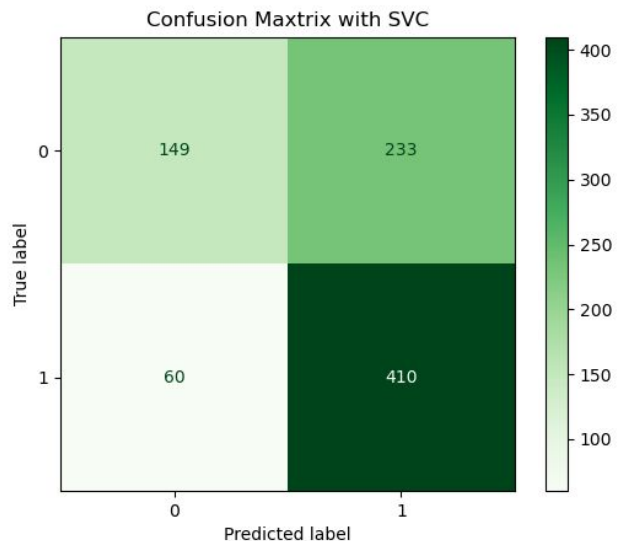

- Parameters Examined
- Stop words: none, English, Custom, Custom + English
- Preprocess: none, Lemmatize, and Stem
- Ngram: 1:1, 1:2, 2:2
- Lasso, Ridge
- Test Score of 68.30

Random Forest

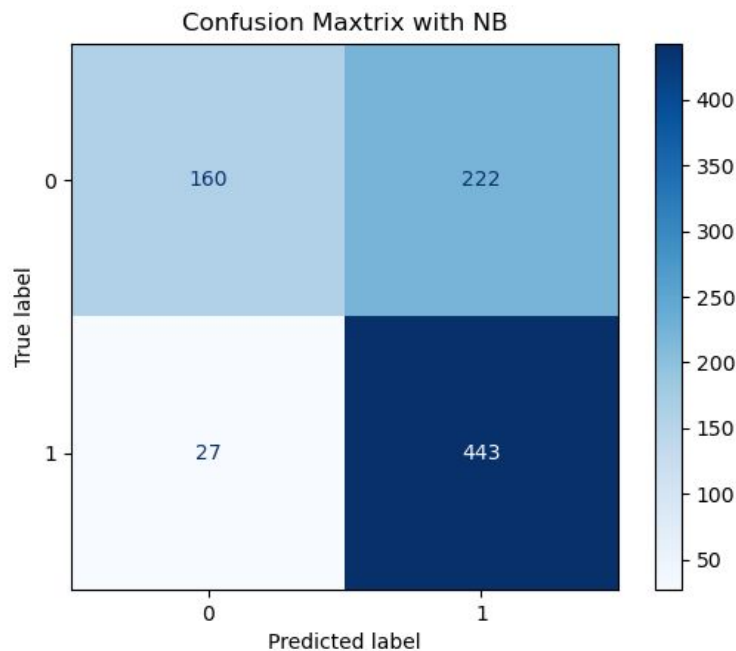

- Parameters Examined
- Stop words: **none**, English, Custom
- Preprocess: **none**, Lemmatize, and Stem
- Ngram: **1:1**, 1:2, 1:3, 2:2
- Max Depth: 4, 7, **10**
- Bootstrap: True, **False**
- Test Score of 62.08%

SVC

- Parameters Examined
- Stop words: none, English, and Custom
- Preprocess: none, Lemmatize, and Stem
- Ngram: 1:1, 1:2, 1:3, 2:2
- C: 25, 50, 100
- Test Score of 65.61%

Naive Bayes

- Parameters Examined
- Stop words: none, English, Custom, Custom + English
- Preprocess: none, Lemmatize, and Stem
- Ngram: 1:1, 1:2, 1:3, 2:2
- Alpha: .5, .75, 1
- Test Score of 70.77%

Comparison of Models

Purpose

The point of this project is to use social media posts to find tourists that we can digitally market to while identifying digital nomads that can become marketing partners with an 80% accuracy rate.

Recommendations

I recommend:

Start using the NB model to find Tico/Expat posts on social media.

Once the Reddit Civil War is over, we collect more data to refine the model.

The slide features a dark teal background with large, faint leaf patterns. In the corners, there are more detailed leaf illustrations: top-left and bottom-left in gold, and top-right and bottom-right in teal.

Thanks!
